Remark

- Carbon Equivalent (%) = C + Mn/6 + Si/24 + Ni/40 + Cr/5 + Mo/4 + V/14 (JIS Standard)
- Carbon Equivalent (%) = C + Mn/6 + (Cr + Mo + V) / 5 + (Ni + Cu) / 15 (AS, ASTM Standard)
- Chemical Composition on sensitivity of welding crack = C + Si/30 + Mn/20 + Cu/20 + Ni/60 + Cr/20 +Mo/15 + V/10 +5B
- Bend test on material grades SS400, SS490, SS540
- Additional chemical composition controls for material under grade A992 are as follows : Ni (max.) = 0.45, Cr (max.) = 0.35, Mo (max.) = 0.15 and Mn/S (min.) = 20

*: Nitrogen control excluded

Remark A : Impact test on material grades SM400, SM490, SM520, SM400B, SM490B, SM490YB, SN400B, SN490B, 43C and 50C with thickness > 12 mm. at 0°C

B : Impact test on material grades 43B, 50B, S275JR and S355JR with thickness > 12 mm. at 20°C

C : It is permissible to vary the carbon and manganese contents (ladle analysis) for grade 50B and 50C on the basis of an increase of 0.06% manganese content for each decrease of 0.01% carbon or vice versa up to maximum manganese content of 1.60% and maximum carbon content of 0.22% for grades 50B and 50C

D : The yield ratio (max.) for all thickness of materials under grades A992 is 85%

E : For grades 50 steel of thickness 20 mm. and under, the tensile strength shall be a minimum of 485 N/mm²

F : A maximum of managnese of 1.50% is permissible, with an associated reduction of the carbon maximum of 0.03%

G : For the H section, when the t1 is 9 mm. or less, the upper limit of the yield point or poof stress shall not be applied

H : For the H section, when the t1 is 9 mm. or less, the upper limit of the yield ratio shall be 85%
